Recommended Citation

This Book is brought to you for free and open access by the College of Nursing at The Aquila Digital Community. It has been accepted for inclusion in Student Brochures by an authorized administrator of The Aquila Digital Community. For more information, please contact Joshua.Cromwell@usm.edu.
What to look for
- Many Infections
- Fatigue
- Troubled Breathing
- Bone Pain
- Weight Loss
- Bleed Easily
- Fever and Chills

Causes
- Genetics
- Environmental factors

Answers
1) White blood cells
2) 4 common types
3) Acute lymphoblastic leukemia

References:

What is Leukemia?

Leukemia is the cancer of white blood cells. White blood cell count increases at an irregular rate. This cancer develops slowly or very fast. It can affect children and adults.

Types of Leukemia

There are four types of leukemia including:

- Acute lymphoblastic leukemia (ALL).
  - Childhood cancer with good outcomes.
- Acute myeloid leukemia (AML).
  - Cancer in adults and has a good survival rate.
- Chronic lymphoid leukemia (CLL).
  - Adulthood cancer with a low response to treatment
- Chronic myeloid leukemia (CML).
  - Adult cancer that requires a bone marrow transplant.

Risk Factors

- Smoking
- Genetic disorders- you get it from your parents.
- Previous cancer treatment
- Family history of leukemia
- Chemical exposure

Test your knowledge

1) What kind of blood cells does Leukemia affect?
2) How many types of Leukemia are there?
3) What type of leukemia affects children?

*see back of pamphlet for answers.

Did you know?

Leukemia is the most common cancer of the blood.

How to Cope with Leukemia

- Ask questions
  - Learn about your condition and what your options are.
- Have support
  - Allow friends and family into your life during this time.
  - They can provide both emotional and physical support.
- Talk to someone
  - Find a support group. Hospital workers, other leukemia patients, or a counselor, are some of the people you can talk to.
