

Supplementary Figure S14: Annotation of novel Testes-restricted, recently-evolved, clustered (TRC) miRNA clusters identified in obscura group species, *D. pseudoobscura* and *D. persimilis*. (A) Genomic organization and small RNA read density of orthologous *dps_3416* → *dps-mir-2536* TRC clusters in *D. pseudoobscura* and *D. persimilis*. (B) Genomic organization and small RNA read density of orthologous *dps-mir-2510* → *dps_23* TRC clusters in *D. pseudoobscura* and *D. persimilis*. Tissue code indicates the miRNAs are all highest expressed in male body/testis libraries. Note that there are also additional copies of some of these TRC loci located outside of these clusters.
