

Distribution of **all** confident + candidate-rescued miRNAs by class

**miRNA classes**

- Mirtron
- Non testes-restricted, canonical miRNA
- Testes-restricted, clustered, canonical miRNA

Supplementary Figure S6: Distribution of miRNAs for three classes of miRNAs within each *Drosophila* species. These classes are defined by biogenesis pathway and canonical miRNAs are further divided by their testes-restricted expression. Only “confident” and “candidate-rescued” loci are included; loci that are considered “candidate” only and lack further rationale to be rescued based on a confidently processed miRNA ortholog are not included in these pie charts.
